

Peter Hergott

INCO engineering s.r.o.

<http://www.incoengineering.cz>

Bilateral Meetings

- Tuesday (13:00 - 16:00)

Description

The focus of INCO engineering is put on the technology for vertical, inclined, and horizontal transport, mainly in the underground mines, but also in the open-pit ones. The extensive production plan includes hoists with a frictional disc as well as drum hoists, both of various constructions and output of up to 2x5500 kW and necessary equipment as skips, cages, and others. Another very important part of our activities revolves around modernisations and reconstructions of older mining hoists and other equipment, be it our own products or machinery and equipment manufactured by other suppliers.

Organization Type

producers, organizations
